

# USER INTERFACE DESIGN(CS23A34)

ROLL NO:240701581

NAME:VELVIZHI M

**EXP NO 8 a) : Create storyboards to represent the user flow for a mobile app (e.g., food delivery app) using Balsamiq**

**Aim:**

To create storyboards representing the user flow for a food delivery mobile application using Balsamiq.

**Tools Required:**

Balsamiq Wireframing Tool, Computer System.

**Theory:**

Storyboard is a visual representation of user interaction with an application. It helps in understanding the flow of screens and user actions. Wireframes are simple black and white layouts that focus on structure and usability rather than design details. Using Balsamiq, UI elements can be arranged to represent the user journey clearly.

**Procedure:**

1. Open Balsamiq and create a new project.
2. Add wireframe screens for required pages.
3. Design Home Screen with search bar and categories.
4. Design Menu Screen with food items, price, and add button.
5. Design Order Confirmation Screen with order summary and delivery time.
6. Arrange screens in order of user flow.
7. Connect screens using arrows.
8. Save and export the storyboard.

**Screens Used:**

The Home Screen contains a search bar and category options for selecting food. The Menu Screen displays food items with price and an add option. The Order Confirmation Screen shows order details and estimated delivery time.

### User Flow:

The user opens the app and searches for food in the Home Screen. The user selects items in the Menu Screen. After placing the order, the user views the Order Confirmation Screen.

### Observation:

The storyboard clearly shows the user flow between screens. The black and white design helps in focusing on layout and usability. Navigation between screens is simple and easy to understand.

### Result:

The storyboard was successfully created using Balsamiq with a clear user flow between Home, Menu, and Order Confirmation screens.
