BAD MODEL (Game Interface – Poor UI)

1. Design Style:

- Overloaded interface with too many icons and elements on a single screen.
- Inconsistent colors and button styles create visual confusion.
- Poor spacing and alignment reduce readability.

2. Content Presentation:

- Information such as *Level Up, Coins, Ads, Free Gifts* is displayed without priority.
- Text and icons compete for attention, making it hard for users to focus.

3. Navigation:

- Icons are unclear and lack proper labels.
- Users may struggle to identify primary actions like play or shop.

4. User Experience Issues:

- Too many distractions (ads, gifts, loading animation).
- Not beginner-friendly and increases cognitive load.

5. Overall Impact:

- Leads to confusion and frustration.
- Users may exit the app quickly due to poor usability.

GOOD MODEL (Game Interface – Effective UI)

1. Design Style:

- Clean, minimal, and visually balanced layout.
- Consistent color theme with proper contrast.
- Clear visual hierarchy guides user attention.

2. Content Presentation:

- Important actions like **Play**, **Shop**, and **Invite Friends** are clearly highlighted.
- Coin balance is visible but not distracting.

3. Navigation:

- Clearly labeled buttons with recognizable icons.
- Simple bottom navigation for easy access to main functions.

4. User Experience Benefits:

- Easy to understand even for first-time users.
- Reduces cognitive load and improves engagement.

5. Overall Impact:

- Encourages longer interaction and better user satisfaction.
- Professional and user-friendly design.

Comparison Summary:

- The **Bad Model** lacks clarity and overwhelms users with unnecessary elements.
- The **Good Model** follows UI principles like simplicity, consistency, and focus.

- A well-designed UI improves usability, engagement, and overall user experience.
