

USER INTERFACE DESIGN(CS23A34)

ROLL NO:240701581

NAME : VELVIZHI M

EXP NO 7: Develop low-fidelity paper prototypes for a banking app and convert them into digital wireframes using Pencil Project

Aim:

To design a banking application interface in tablet size layout and evaluate usability through user feedback.

Tools Required:

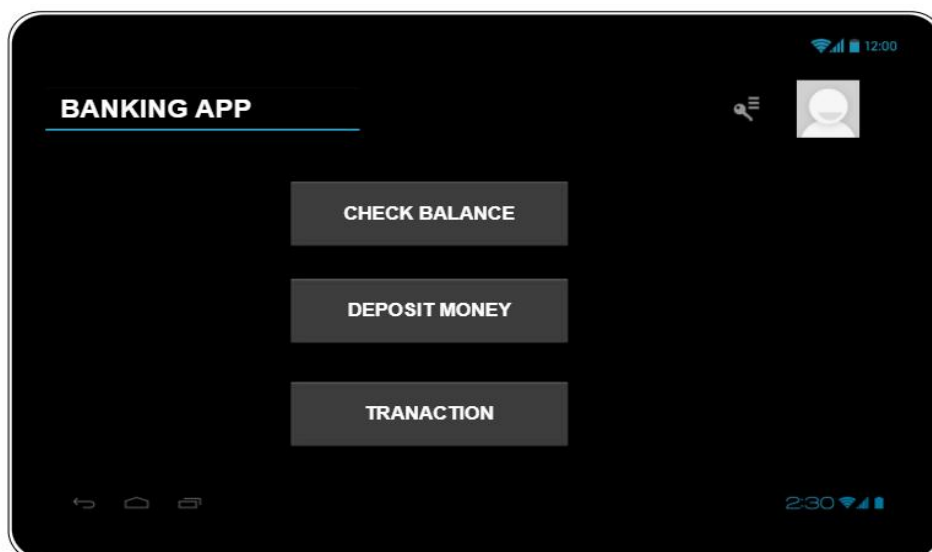

GIMP (GNU Image Manipulation Program), Pencil (Evolus Pencil tool), Computer System, Google Forms.

Theory:

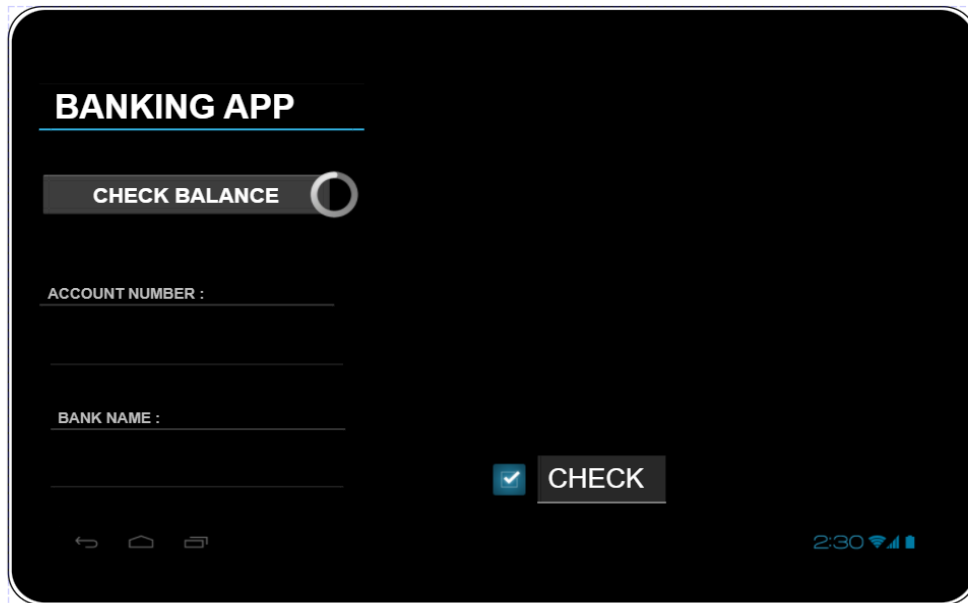

User Interface design improves user interaction and usability. Tablet layout provides more screen space compared to mobile, allowing better arrangement of UI components. Dark-themed designs improve readability and user experience. Banking applications require simple and clear UI for easy operations like checking balance and transactions.

Procedure:

1. Open Pencil or GIMP and set canvas size to tablet resolution (1280 × 800).
2. Design Page 1 (Home Screen) with header “BANKING APP”, profile icon, and buttons like Check Balance, Deposit Money, and Transaction.

3. Design Page 2 (Check Balance Screen) with input fields for Account Number and Bank Name, and a “Check” button.

4. Apply dark theme using black background and white/grey text.
5. Adjust layout with proper spacing and alignment.
6. Organize elements using layers or grouping.
7. Export designs as PNG or PDF.
8. Share with users and collect feedback.
9. Analyze feedback and identify improvements.

Observation: Users found the tablet layout clear and easy to understand. Dark theme improved readability. Buttons and forms were simple and easy to use.

Result: The designed banking app interface was user-friendly and visually clear. Users preferred the structured layout and simple navigation.

Conclusion: Tablet layout improves usability due to larger screen space. Proper alignment and simple design enhance user experience.
